POJECTS

E-commerce website
Spring boot, Angular

📅 Jan 2023 - On-going

- a web application that allows customers to buy industrial products online. Angular provides the front-end framework, enabling interactive and responsive user interfaces, while Spring Boot provides the back-end framework for handling business logic, data storage, and integration with other e-commerce systems. This combination provides a flexible and scalable platform for businesses to sell products online and manage the sales process.

  🏆 **keywords**
